Gary Greenberg, Stacy Keach : A Grain of Sand: Nature's Secret Wonder before purchasing it in order to gage whether or not it would be worth my time, and all praised A Grain of Sand: Nature's Secret Wonder:

0 of 0 people found the following review helpful. Beautiful book with amazing photographsBy SeekerBeautiful book with amazing photographs. I love rocks and this is a bit different-- who would have thought sand would look so awesome. bought it for my coffee table.0 of 0 people found the following review helpful. Gary Greenberg is a Genius Photographer!!!!By Jenny LucasGary Greenberg is a genius photographer! This is the most wonderful, wonder filled book I have ever seen in my life! I purchased this for a friend and she and her family raved about it so I had to get one for myself too. It sits on my coffee table for all to see so I can imagine others falling in love and buying it too. I promise you, you've never seen anything like it before. I wonder if he sells large prints to frame as art? I'm going to go find out right now! Thank you Gary Greenberg!!!0 of 0 people found the following review helpful. A Grain of Sand.....By E. ParkinI am so glad that I chose to "Look Inside" this wonderful book that Dr.Greenberg has presented to

the world! Just a few pages and I was busy buying TWO copies ...One for my friend and One for me. We could not believe that that was what sand really looked like!"I volunteer as a "Greeter" a couple of hours each week at our local "Maritime Museum" and took my "Treasure" withme yesterday and showed it to one and all that came by to see our local "Treasures". We showcase "Blackbeard'sTreasures" that have been found after 300 years and the skeleton of a Sperm Whale that went aground some 10 orso years ago and his skeleton hangs from the ceiling. Which took many years of waiting for nature to take care of theremains and then the final cleaning and putting the bones back together and hanging him from the ceiling.This book merits a "Gold Medal" if there are such rewards.

"To see a world in a grain of sand, And a heaven in a wild flower. To hold infinity in the palm of your hand, And eternity in an hour." William Blake, "Auguries of Innocence" 1805 Here is the world viewed within a grain of sand, thanks to the stunning three-dimensional microphotography of Dr. Gary Greenberg. To some, all sand looks alike--countless grains in a vast expanse of beach. Look closer--much closer--and your view of sand will never be the same. Employing the fantastic microphotographic techniques that he developed, Greenberg invites readers to discover the strange and wonderful world that each grain of sand contains. Here are the sands of Hawaii and Tahiti, the Sahara and the Poles, a volcano, each exquisitely different, and each telling a fascinating geological story. Red sand and yellow, white sand and black, singing sand and quicksand: Greenbergs pictures reveal the subtle differences in their colors, textures, sizes, and shapes. And as this infinitesimal world unfolds so does an intriguing explanation of how each grain of sand begins and forms and finds itself in a particular place, one of a billion and one of a kind.
