Roxanne Kuter Williamson : American Architects and the Mechanics of Fame before purchasing it in order to gage whether or not it would be worth my time, and all praised American Architects and the Mechanics of Fame:

Anyone who has done research in the architectural history of the nineteenth and twentieth centuries must have observed sooner or later that there are lineages of descent from certain leading figures. It is [Williamson's] merit to have traced such lineages in great detail and, in addition, to have proposed a fascinating hypothesis about the right

time during which it would be most advantageous for an apprentice architect to be in the office of a master." oEduard F. Sekler, Professor of Architecture, CarpenterCenter for the Visual Arts, Harvard UniversityAbout the AuthorRoxanne Kuter Williamson is Professor Emerita, School of Architecture, the University of Texas at Austin.
