K. J. van den Berg, M. Daudin-Schotte, H. van Keulen : Analisys and application of dry cleaning materials on unvarnished pain surfaces (Quaderni Cesmar7) before purchasing it in order to gage whether or not it would be worth my time, and all praised Analisys and application of dry cleaning materials on unvarnished pain surfaces (Quaderni Cesmar7):

This book began as a project of Netherland Cultural Heritage Agency (RCE) in collaboration with the Dutch restorers of paintings and Curtauld Institute of Art that was aimed to achieve a better understanding of material properties for dry cleaning for their application on painted surfaces unpainted. The present work concerns the project carried out in the period 2006-2009, including the analysis of materials and the description of the methodology for the assessment of the correct methods for cleaning with dry methods; the book will also seek to focus on the integrity of the painted surfaces with oil and tempera sensitive to contact with solvents.
