**From Routledge : Architecture in the Space of Flows** before purchasing it in order to gage whether or not it would be worth my time, and all praised Architecture in the Space of Flows:

Traditionally, architecture has been preoccupied with the resolution of form. That concern helps to make photogenic buildings, which have received a great deal of attention. This book looks instead at the idea of the flows, which connects things together and moves between things. It is more difficult to discuss, but more necessary, because it is what makes things work. Architects have to think about flow – the flow of people through buildings, the flow of

energy into buildings, and waste out of them – but usually the effects of flow do not find expression. The essays gathered here present a collection of exploratory ideas and offer an understanding of buildings, people and settlements through concepts of flow.

"Provides remarkable insights into how architecture can be conceptualized not in, but 'as a space of flows'." – ErdkundeAbout the AuthorAndrew Ballantyne is Professor of Architecture at Newcastle University, UK. His books include *What is Architecture?*, *Deleuze and Guattari for Architects* and *Architecture Theory*. Chris L. Smith is an Associate Professor in Architectural Design and *Techné* and is an Associate Dean of the Faculty of Architecture at the University of Sydney. His research is concerned with the interdisciplinary nexus of philosophy, biology and architectural theory.
